

# OSINT THREAT INTELLIGENCE REPORT

Target: 28247211d1eb08370aa363f08821a653 (Poebot/AgentWDCR/SDBot) | Type: File | Date: 2026-06-11 21:45 WIB

## VERDICT: MALICIOUS

Risk Level: HIGH | Confidence: HIGH

### Executive Summary

The file 28247211d1eb08370aa363f08821a653 is a malicious PE32 executable identified as Poebot/AgentWDCR/SDBot, a multi-capability trojan, worm, and coin miner. It was delivered as an AES-256-encrypted ZIP archive (password: 'infected'). VirusTotal detection is 61/72 with strong community consensus (score -64). The sample uses runtime IAT resolution, high-entropy encrypted payload in the .data section (7.95 entropy, 74% of file), custom cryptographic routines, and anti-debug via GetTickCount. Three C2 domains registered on 2020-11-11 (say.longiivekorea.in, cd.faiidovvn.info, her.d0kbilo.com) indicate a coordinated campaign. Malicious capabilities include process hollowing, reflective code injection, backdoor, and coin mining.

### 1. Domain Overview

|                   |                                                                  |
|-------------------|------------------------------------------------------------------|
| File Name         | 28247211d1eb08370aa363f08821a653.bin                             |
| File Size         | 74,752 bytes (73 KB)                                             |
| File Type         | PE32 executable (x86) - Windows GUI                              |
| MD5               | 28247211d1eb08370aa363f08821a653                                 |
| SHA1              | 9d16705ff7bd06d238b389f9320e1c646639c2f7                         |
| SHA256            | 86cb2ece83ce6aa8831c5dfd368aa847f3bae52b1f2eb2a3de093227b42772ec |
| Compile Timestamp | 2017-05-26 06:51:58 UTC                                          |
| Compiler          | Microsoft Visual C++ (Rich header, XOR key 0x901b7c20)           |
| Entry Point       | 0x00002bc4                                                       |
| Subsystem         | Windows GUI (2)                                                  |
| Malware Family    | Poebot / AgentWDCR / SDBot                                       |
| Threat Categories | Trojan, Worm, Miner                                              |
| Delivery Method   | AES-256 encrypted ZIP (password: 'infected')                     |
| ZIP MD5           | 6e70cacfe42ef9c349e7b42f2383e86e                                 |
| ZIP SHA256        | e9dc91fd4535552ec9b7a2ca6d8c99010e2d64fb4563e30615472039446f9a1e |

### 2. Infrastructure & Service Exposure

|                         |                                                                                 |
|-------------------------|---------------------------------------------------------------------------------|
| .text Section (Code)    | Virtual Size: 16,134   Raw: 16,384   Entropy: 6.48 (moderate)                   |
| .rdata Section (Data)   | Virtual Size: 2,378   Raw: 2,560   Entropy: 6.04 (runtime error strings)        |
| .data Section (Payload) | Virtual Size: 55,640   Raw: 54,784   Entropy: 7.95 (ENCRYPTED — 74% of file)    |
| Imports (Static)        | KERNEL32.dll (29 APIs) + user32.dll (3 APIs)                                    |
| Key APIs                | GetProcAddress, LoadLibraryA, VirtualAlloc, HeapCreate, GetTickCount, WriteFile |
| Runtime IAT Resolution  | sub_402031 dynamically resolves API addresses — no direct IAT entries           |
| Custom Crypto           | sub_401000, sub_401ef9, sub_40131c — non-standard decryption routines           |

|                    |                                                                                             |
|--------------------|---------------------------------------------------------------------------------------------|
| Manual PE Parsing  | sub_402223 — characteristic of process hollowing / reflective injection                     |
| Anti-Debug         | GetTickCount timing-based anti-debug checks                                                 |
| String Obfuscation | Only 77 printable strings (MSVC boilerplate only); no plaintext URLs, IPs, or registry keys |

### 3. Threat Assessment

| Source                       | Finding                                            | Severity |
|------------------------------|----------------------------------------------------|----------|
| VirusTotal                   | 61/72 detection — trojan.poebot/agentwdcr          | CRITICAL |
| AhnLab-V3                    | Trojan/Win32.Generic.C1979935                      | HIGH     |
| Alibaba                      | Backdoor:Win32/Poebot.19730077                     | HIGH     |
| CrowdStrike                  | Win/malicious_confidence_100% (W)                  | HIGH     |
| DrWeb                        | Trojan.Downloader24.27110                          | HIGH     |
| ESET-NOD32                   | Win32/Poebot.NCA Trojan                            | HIGH     |
| Kaspersky                    | Trojan.Win32.Agentb.iwfe                           | HIGH     |
| Microsoft                    | Backdoor:Win32/Poebot                              | HIGH     |
| Symantec                     | W32.Linkbot                                        | HIGH     |
| TrendMicro                   | WORM_SDBOT.SMA                                     | HIGH     |
| Avira                        | TR/CoinMiner.LW                                    | HIGH     |
| C2: say.longiiveko<br>rea.in | 5/91 VT detections, registered 2020-11-11 (Tucows) | HIGH     |
| C2:<br>cd.faiidovvn.info     | 0/91, registered 2020-11-11 (campaign cluster)     | MEDIUM   |
| C2:<br>her.d0kbilo.com       | 0/91 (10 files detected), registered 2020-11-11    | MEDIUM   |
| IP: 114.114.114.114          | 3/91 detections, AS21859 CN (suspicious DNS)       | MEDIUM   |

### 5. Attack Profile & TTP

**Threat Type:** Trojan / Worm / Coin Miner (Poebot/AgentWDCR/SDBot)

- Runtime IAT resolution to evade static import analysis
  - Custom cryptographic decryption of embedded payload from .data section
  - Manual PE parsing for process hollowing and reflective code injection
  - C2 communication via HTTP to campaign-clustered domains (2020-11-11)
  - Coin mining capability (Avira: TR/CoinMiner.LW)
  - Worm propagation capability (TrendMicro: WORM\_SDBOT.SMA)
- Timeline:** Compiled 2017-05-26 | C2 domains registered 2020-11-11 | Analyzed 2026-06-11

### 6. Recommendations

| Priority | Action                               | Details                                                                       |
|----------|--------------------------------------|-------------------------------------------------------------------------------|
| CRITICAL | Block all file hashes                | Block MD5, SHA1, SHA256 at perimeter (email, web, endpoint)                   |
| CRITICAL | Hunt imphash across environment      | imphash: 78162d63a51f7a8c1f8854b56415124c — find related samples              |
| HIGH     | Block C2 domains                     | say.longiivekorea.in, cd.faiidovvn.info, her.d0kbilo.com — block at DNS/proxy |
| HIGH     | Monitor DNS queries                  | Watch for *.faiidovvn.info, *.d0kbilo.com, *.longiivekorea.in                 |
| MEDIUM   | Pivot on campaign date 2020-11-11    | Search for other domains/files registered/compiled on this date               |
| MEDIUM   | Dynamic analysis in isolated sandbox | Extract decrypted payload and confirm C2 protocol, data exfiltration          |

|     |                  |                                                                      |
|-----|------------------|----------------------------------------------------------------------|
| LOW | Create YARA rule | Based on Rich header hash 0a9bb3b3 and .data section characteristics |
|-----|------------------|----------------------------------------------------------------------|

7. Indicators of Compromise (IOC)

|                      |                                                                          |
|----------------------|--------------------------------------------------------------------------|
| MD5                  | 28247211d1eb08370aa363f08821a653                                         |
| SHA1                 | 9d16705ff7bd06d238b389f9320e1c646639c2f7                                 |
| SHA256               | 86cb2ece83ce6aa8831c5dfd368aa847f3bae52b1f2eb2a3de093227b42772ec         |
| imphash              | 78162d63a51f7a8c1f8854b56415124c                                         |
| TLSH                 | T15673E1A764420024C8CE56B295FB0E12B77F8E0316759CA7FB891F06AB363EC5617673 |
