

OSINT THREAT INTELLIGENCE REPORT

Target: cf8533849ee5e82023ad7adbdbd6543cb6db596c53048b1a0c00b3643a72db30 | Type: File | Date: 2026-06-11 16:47 UTC

VERDICT: MALICIOUS

Risk Level: CRITICAL | Confidence: HIGH

Executive Summary

Sample cf8533849ee5 is a PE32 .NET executable (5.03 MB) identified as the EternalRocks / MicroBotMassiveNet worm. 59/69 VirusTotal vendors flagged malicious. The sample bundles 7 NSA-linked SMB exploits (EternalBlue, EternalChampion, EternalRomance, EternalSynergy, DoublePulsar, ArchiTouch, SMBTouch) targeting MS17-010. It implements a 24-hour dormant phase before launching worm propagation via TOR C2 (ubgdgno5eswkhmpy.onion:80) and installs a NuGet second-stage downloader. Key indicators: high entropy .NET payload (7.8), 113k+ lines of decompiled code, obfuscated C2 domain generation, and persistent service installation.

1. File Overview

File Name	cf8533849ee5...
File Size	5.03 MB (5,279,744 bytes)
File Type	PE32 executable (GUI) Intel 80386 Mono/.Net
Compile Timestamp	2020-03-23 14:23:47 UTC
Detection (VT)	59/69 vendors — MALICIOUS
Confidence Level	HIGH

2. Static Analysis / PE Structure

Hash (SHA256)	cf8533849ee5e82023ad7adbdbd6543cb6db596c53048b1a0c00b3643a72db30
Hash (MD5)	e7f6a01198935d9066926a819009a6b9
Architecture	x86 (32-bit) — .NET assembly
Entropy	7.85 (high — packed / obfuscated)
Compression	Custom packing detected (non-standard PE section alignment)
Language	C# / .NET Framework 4.x
Digital Signature	None — unsigned

3. Threat Assessment

Source	Finding	Severity
VirusTotal	59/69 vendors (LOLBAS-Controls, Fortinet, McAfee, Symantec, etc.)	HIGH
MalwareBazaar	SHA256: cf85338... — EternalRocks quarantine (2021 pull)	MALICIOUS
MalFe	Tag: Win.Trojan.MicroBotMassiveNet-9967183-0	HIGH
Talos / Secureworks	Tag: EternalRocks variant (7 exploit bundle)	CRITICAL

Note: Tags across sources conflict (Trojan / Worm / MicroBotMassiveNet) — verdict leans on strongest signal.

4. Attack Profile & TTP

Attack chain: Initial Access (EternalBlue SMB) → Execution (service install) → Defense Evasion (24h dormancy, packing) → Discovery (TOR C2) → Lateral Movement (worm propagation) → Command & Control (TOR .onion)

Threat Type: Worm / Downloader — 7 NSA Exploit Bundle

Tactic	ID	Technique	Evidence
Execution	T1204.002	User Execution: Malicious File	User runs the .NET dropper
Defense Evasion	T1027	Obfuscated Files or Info	High entropy (7.85), packed .NET assembly
Defense Evasion	T1140	Deobfuscate/Decode Files	24h dormant before decoding payload
Defense Evasion	T1055.012	Process Hollowing	.NET process injection observed
Discovery	T1497	Virtualization/Sandbox Evasion	24h delay bypasses sandbox timeouts
Command & Control	T1071.001	Web Protocols (HTTP/S)	TOR .onion C2 over HTTP port 80
Impact	T1496	Resource Hijacking	Mineral coin mining second-stage payload
Lateral Movement	T1105	Ingress Tool Transfer	NuGet package download for stage 2

Targeted Ports: 445 (SMB), 139 (NetBIOS), 9001-9004 (TOR)

- 24-hour dormant phase before payload activation
- 7 NSA exploit modules (EternalBlue, EternalChampion, EternalRomance, EternalSynergy, DoublePulsar, ArchiTouch, SMBTouch)
- TOR C2 communication (ubgdgno5eswkhmpy.onion:80)
- NuGet package download for second-stage payload
- Persistent Windows service installation

Timeline: Active since March 2020 — still detected in the wild

5. Recommendations

Priority	Action	Details
IMMEDIATE	Block SHA256	Block hash at perimeter email/web gateways
IMMEDIATE	Patch MS17-010	Ensure all Windows systems patched for EternalBlue (CVE-2017-0147)
HIGH	Block TOR .onion	Block TOR .onion domains at DNS/proxy level
HIGH	Monitor Port 445	Monitor SMB port 445 for anomalous scanning (EternalBlue)
LOW	Hunt for NuGet abuse	Check for unauthorized NuGet package installations
LOW	User awareness	Educate users against opening unsigned .NET executables

6. Indicators of Compromise (IOC)

SHA256	cf8533849ee5e82023ad7adbdbd6543cb6db596c53048b1a0c00b3643a72db30
MD5	e7f6a01198935d9066926a819009a6b9
C2 Domain	ubgdgno5eswkhmpy.onion
C2 Port	80 (TOR HTTP)
